CRYPTOCURRENCY

a digital currency in which transactions are verified and records maintained by a decentralize system using cryptography, rather than by a centralize authority.

Money is anything that is generally accepted as a mode for payment of goods & services and repayment of loans & debts such as taxes, etc., in a particular nation or country. Money was invented to facilitate trade as the barter system, but it can not express the value and prices of goods & services. The term money covers everything, like currency notes, coins, cheques, etc., to carry out all economic transactions and settle claims. As a currency, money circulates from country to country and person to person to facilitate trade. Different stages of money are Commodity Money, Metallic Money, Paper Money, Credit Money, and Plastic Money.

What is NFT?

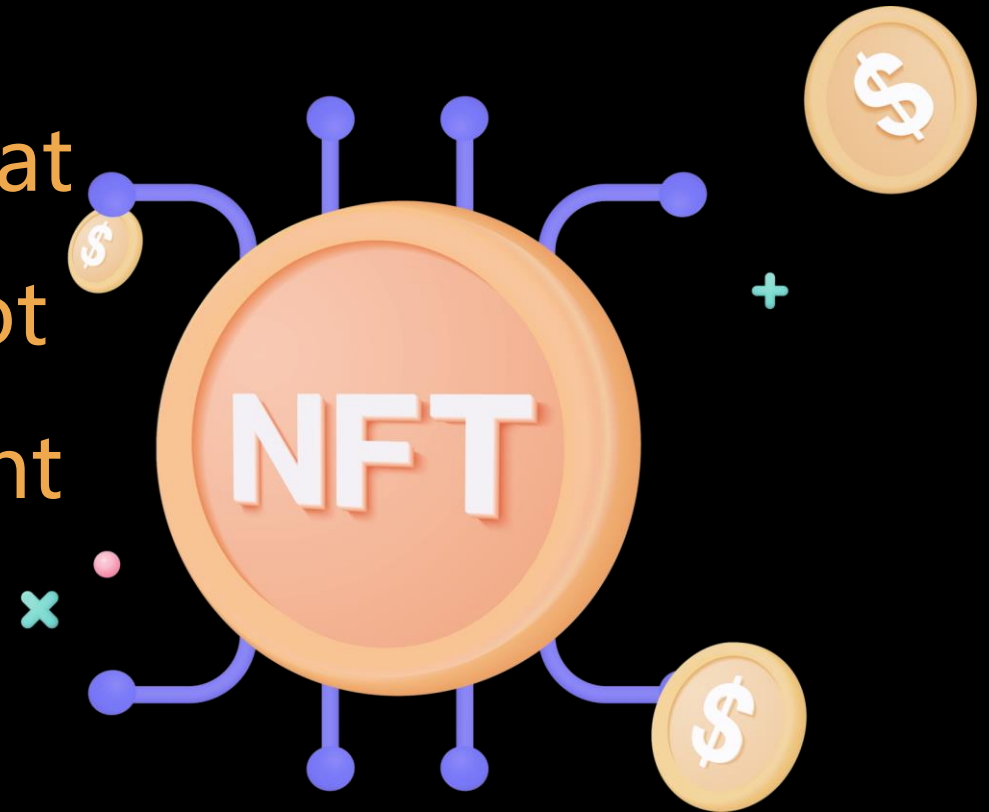

A non-fungible token (NFT) is a unique digital identifier that cannot be copied, substituted, or subdivided, that is recorded in a blockchain, and that is used to certify authenticity and ownership. The ownership of an NFT is recorded in the blockchain and can be transferred by the owner, allowing NFTs to be sold and traded. NFTs can be created by anybody,

NFT Crypto

NFTs (non-fungible tokens) are unique cryptographic tokens that exist on a blockchain and cannot be replicated. NFTs can represent digital or real-world items like artwork and real estate.

Why invest in NFT?

As with any investment, buying NFTs gives you the potential to make money in the long run. Some NFTs have sold for surprising amounts of money. If you buy an NFT at the start of a project, you could benefit if it gains in popularity (and value). You might be able to sell it for more than you paid to get it.

NFT Gaming

In the gaming industry, it's something where if the gamer is putting their value into the game, it just makes complete sense they can take this value out of the game.

Key to many games is the idea of customization, this could be expanded to enable creators to make NFT-powered assets for their favorite games and sell them on a marketplace.

Blockchain Protocols

Block chain and block chain standards help the NFTs to create that decentralized nature of network where users can connect with one another without any third parties. Using common standards of block chain, NFTs can create their own elements within the ecosystem, which will be immutable and secured.

Cryptocurrencies /Tokens

NFTs will have different currencies compared to the real world. It will move on from fiat or paper-based currencies to digital currencies.

Digital tokens and cryptocurrencies will be the main source of value within the system. Platforms within the NFTs already offer various forms of tokens.
